Deadline for manuscript submissions:

**31 August 2022**

### Message from the Guest Editors

Recent research has focused on the need to integrate artificial intelligence, machine learning, blockchain, network security, data analysis, big data, the Internet of Things, and other fast-developing fields to predict methods and technologies to provide real-time solutions to certain problems.

This Special Issue of *Electronics* will focus on the application of soft computing methods in intelligent automation systems, as well as attempts to enhance protection and privacy with complete communication and delivery as blockchain and AI technologies are allowed beyond 5G (B5G). The research emphasis is on incorporating and unifying technologies to produce new and smart networking services and applications as both blockchain and AI advance further.

### Keywords

- artificial intelligence
- big data
- blockchain
- cloud computing
- wireless sensor network
- deep learning
- fuzzy logics
- internet of things
- machine learning
- 5G
